# GAME OF 20

RULES & VIDEO AT: <http://kloonigames.com/gameof20/>

## PHASE 1: DRAFTING

The starting player crosses out one of the numbers (3 - 20) and writes the same number into their hand.

Players then take turns selecting **2 of the remaining numbers at a time** until all the numbers have been crossed out.

Both players should have 12 numbers in their hand.

To place a number onto the grid, cross it out of your hand and write it into the space.

## PHASE 2: TILE PLACEMENT

Players take turns placing one number at a time on the board according to the following rules:

Grid spaces are considered to be adjacent if they share an edge.

If an empty space has **1 or zero adjacent numbers** then only the **lowest number** you have can be placed there.

If an empty space has **2 or more adjacent numbers** then only **the tile that is the sum of the adjacent numbers** can be placed there.

The game continues until no more valid moves are available. After that both players count up the values of the number that remain in their 'hands'. **The player with a lower total wins.**
